

**40
m²****PIGEONS REPELLER****OUTDOOR****CHASES AWAY PIGEONS****Pigeons from your balconies, windowsills, terraces, yards**

The device repels pigeons. It emits audible sounds within a radius of 4 to 5 meters in front of the device. Panicked by these sounds, the pigeons feel a danger pushing them to leave the premises. The device thus protects an area of 20 to 40 m² from droppings and cooing.

- Protects a maximum area of 40 m²
- Power supply: 3 LR6/AA batteries.
- Maximum power consumption: 0.01 watts.
- Sound frequencies: 2-3.5 kHz sinusoidal.
- Maximum sound level: 103 dB.
- Dimensions : 95 x 40 x 70 mm.
- Waterproof IP44.

Sound waves bounce off smooth surfaces, but are absorbed by soft materials such as plants. Sound waves do not pass through walls, trees or objects.

**INSTALLATION AND SETTINGS:**

Place 3 1.5 V batteries [AA – LR6] [not supplied] in the device.

Notes: Batteries must be inserted respecting the polarities indicated on the device. Non-rechargeable batteries should not be recharged. Different types of batteries or new and used batteries should not be mixed. Used batteries must be removed from the device and returned to the point of sale where they were purchased to enter the recycling system or deposited in the recycling center. If the device will not be used for a long time, the batteries should be removed. The supply terminals must not be short-circuited.

Use the wheel to turn on the device and to adjust the volume; the steady red indicator light confirms proper operation. To avoid any discomfort, it is advisable to vary the intensity during the day and turn it off at night.

Place the device on a windowsill or on a piece of furniture, facing the area to be protected.

For best results, do not cover the device or place it behind large objects.

Leave the device running continuously during the day.

If no effectiveness is observed after several days of use, change the location of the device.
