BED BUG DETECTION BOXES

CHASES AWAY BED BUG

flour moths, cocoa moths and dried fruit moths, cereals moths

Allows early detection of any infestations: for example, during a trip, arrange the boxes on arrival in the room, The product also makes it possible to the eradication of an infestation. Once box installed, the bed bug explore the textured surface of the detector and enter through all four sides. They are then trapped on the stuck surface and are easily visible throught the transparent protection. Robust plastic design allows use under the matresses.
