Remarks	1. Unless otherwise specified, all specifications and parameters shall be measured under 230VAC, rated load and 25 °C ambient temperature. 2. Noise measurement method: test within the sound box at a distance of 300mm from the product. 3. Derating output is required under low input voltage. Please refer to the static characteristic curve for details. 4. The power supply is regarded as a component used together with the terminal equipment. Because EMC is affected by the whole set of devices, the terminal equipment manufacturer needs to re confirm EMC for the whole set of devices. 5. The starting time is measured under the cold start state, and continuous startup and shutdown may make the starting time longer. 6. The model certified by CCC, CE and TUV (EN61347-1 EN61347-2-13) is optional. Please contact Letaron for details.
