GLUE TRAP

INDOOR

CHASES AWAY FLYING INSECTS

Mosquitos, tiger mosquitoes, flies, gnats... from your interior (kitchen, living room, bedrooms...)

The trap lamp eliminates flying insects: mosquitoes, tiger mosquitoes, flies, midges... Attracted by the ultraviolet light, diffused 360° around the trap lamp, flying insects get stuck on the sticky surface of the glue plate located inside the trap lamp. Trapped, they die quickly. The trap lamp protects your interior (kitchen, living room, bedrooms...). It is effective on approximately 30 m². The glue plate is effective for up to 2 months, depending on the dust, and should be thrown away as soon as it is full.

- Operating area: 30 m².
- Dimensions: Ø 12 cm x H. 29.7 cm.
- Power supply: 220-240 V ~ 50-60 Hz.
- Power: 9 W.
- Fluorescent tube: G23 / U type / BL-9W.
- Tube life: 6000 h.
- U.V. light: U.V. wavelength: 365-395 nm.
- Power cord: 1.2 m.

INSTRUCTIONS OF USE

- 1 - Unplug the trap lamp and place it on a horizontal surface.
- 2 - Remove the cover.
- 3 - Remove the protective seal from the glue board.
- 4 - Place the glue board inside the trap lamp, ensuring the sticky side is facing inward and aligning the openings.
- 5 - Plug the trap lamp into a 220-240 V ~ 50-60 Hz outlet and press ON.

To maximize the trap lamp's appeal, place it high up in the darkest part of the room. It can be placed on a piece of furniture or hung on the wall using the included mounting bracket.

Tips for eliminating flying insects from a bedroom: Turn off the lights, close the windows, and plug in the trap lamp 20 minutes before going to bed.

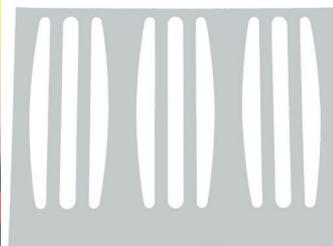

MAINTENANCE

Cleaning the device: Unplug the glue trap lamp and allow the U.V. tube to cool. Clean the trap lamp with a dry cloth each time you change the glue board. Never use a damp cloth or chemical products.
